An explanatory manuscript in either English or French, accompanies each set of slides, which may be read as the slides are shown upon the screen. The express charges are very reasonable as the slides are well packed, and the weight kept down to a minimum consistent with safety in transportation. Approximate express charges on sets one way from Ottawa to points in Ontario 60 cents, Quebec 80 cents, Maritime Provinces and Saskatchewan \$1.20, Alberta \$1.40, British Columbia \$1.55. Requests for slides should be made sufficiently in advance of the definite date set for the meetings where the slides are to be used to allow for shipping a few days in advance of the meetings.

Press

The department issues a weekly press service dealing with topical subjects on Canadian agriculture. Press notices are also prepared outlining the scope of new bulletins and circulars. These services are available to and maintained for the benefit of the press.

Exhibits

The educational exhibits work of the whole department is centralized, and supervision and direction of exhibits and the arranging of exhibit circuits is carried out by the Publicity and Extension Division.

Communications respecting Lantern Slides, Press, and Exhibits should be addressed to the Director, Publicity and Extension, Department of Agriculture, Ottawa.

Single copies of publications listed herein are available for free distribution in Canada, except in the case of those listed on page 12 under the heading Publications For Sale by the King's Printer.

All requests for publications should be addressed to the Director, Publicity and Extension Division, Department of Agriculture, Ottawa, Ont. Letters so addressed do not require postage when mailed in Canada.

but dependence of joint control could also be from voluntary interactions and
of different forms of exchange and the inability to perfectly limit costs
and benefits. In this case, the CPT model (see Fig. 1) and the PBM model (see Fig. 2)
both provide similar results. A simpler mechanism
is the individual's power of self-referential evaluation, which is included
in the PBM model and is not included in the CPT model.

Additional research is needed to confirm the above result.
In addition, it is interesting to compare the results with other models
that have been developed to explain self-evaluation of one's own performance.

The limitations of this study are described next. First, the data were collected in a
laboratory setting, so the effect of time variability cannot be inferred. In
addition, the subjects were asked to make a single judgment, so the
possibility of learning or adaptation was not considered.
